

Trusona Passkey Evaluation Package

Make an informed business decision on your passkey project

Passkey Evaluation Package

Trusona's Passkey Evaluation package is a combination of product and services managed in collaboration with your digital business leaders, product owners, UX designers and security leads, to help you make an informed business decision on your passkey project.

The evaluation helps you understand the business and economic factors required to deploy passkeys to your website, including the time, cost, effort, risk and skillsets needed.

The evaluation typically lasts between 60-90 days and includes:

- Business goals review
- Strategy and UX design workshop
- 1-year license of Trusona Authentication Cloud for up to 10,000 MAUs
- ROI and business case templates
- 1 Named Trusona Program Manager

At the end of the evaluation, you will have the technical and business tools needed to fully evaluate a passkey project.

Evaluation deliverables

One week after the conclusion of the evaluation, Trusona will provide you with a comprehensive set of tools that includes:

-  Passkey business case
-  Build vs. Buy comparison proposal
-  Technology plan
-  Figma prototypes of your passkey user journeys
-  Access to a live passkey-enabled website
-  Passkey production deployment plan

The Passkey Evaluation serves as a low-risk option to help you assess the feasibility of deploying passkeys and comes with no obligation to commercially deploy Trusona, although the product can be upgraded to a commercial license without service interruption should you move forward.

Global industry support for passkeys

Many prominent brands across multiple industries – including CVS Health, eBay, Hyatt, Kayak, PayPal and Shopify – have already embraced passkeys, further highlighting their value and effectiveness. Passkeys replace passwords and legacy 2FA such as OTP over SMS that lack security, usability and cost-effectiveness.

While passkeys are an open standard, that alone does not make a website or app automatically provide them. In fact, significant steps are required to add passkeys to a website or app.

The key determinant of passkey adoption lies in the thoughtful design and effective execution of the new passkey-related user journeys which complement and extend your security requirements.

Why Trusona

Trusona is a FIDO Alliance Board member and serves as Founder and Chair of the FIDO UX Working Group. Trusona has a proven process for deploying passkeys, along with unmatched UX and design expertise, regardless of whether you decide to 'build' or 'buy'.
